INDEX TO ASSESSMENT REPORTS 1983

INTRODUCTION

Report 84-2 is a bibliographic index to the mineral exploration assessment reports submitted to the Nova Scotia Department of Mines and Energy that became publically available during 1983. This index provides sources of assessment report data, by title only; the actual data itself must be obtained from the documents cited in this index.

Report 84-2 is the third annual Index to Assessment Reports published since the release of Report 81-4 Index to Assessment Reports 1864-1980. The 1981 Index to Assessment Reports is Report 82-2, and the 1982 Index to Assessment Reports is Report 83-2.

All the assessment reports cited in this index have been microfilmed and can be consulted in the libraries of the Halifax and Stellarton offices of the department. Microfiche copies of these reports can be purchased directly from Precision Microfilming Services, 6100 Young Street, Halifax, N.S., B3K 2A4 (902 455-5451). If ordering microfiche copies of assessment reports, please quote the full assessment report number e.g. 11D/10C 21-H-91(01).

ASSESSMENT REPORT TITLES

The titles of the assessment reports cited in this index are not the original titles of the reports, but are modified titles composed by the authors. The modified titles are designed so that it is possible for the reader to determine from only the report title exactly what types of geological, geochemical, geophysical, drilling and other exploration activities are described in each report. Each assessment report title is a composite containing the following information:

Commodity
Location
County
Province
Exploration Company
Licensee (if different from Exploration Company)
Report Contents
Author
Year Written
Number of Pages
Number of Maps
Map Types
Enclosures e.g. drillhole logs, sections

ASSESSMENT REPORT NUMBERS

Each assessment report is uniquely identified by an assigned report number e.g. 11D/10C 21-H-91(01), which is a code consisting of the following five components: Claim Reference map; commodity; county; location; and succesive report number. For example -

11D/10C = Claim Reference map
21 = commodity (= gold)
H = county (= Halifax)
91 = location (= Crows Hill Lake)
(01) = successive report number (= the first report in the assessment file 11D/10C 21-H-91)

These five report number components are described below:

Claim Reference Map

The Claim Reference map system is used by the Nova Scotia Department of Mines and Energy for the purpose of map staking of mineral exploration claims. This Claim Reference map system is based upon the National Topographic System (NTS), whereby each Claim Reference map is one-quarter of a 1:50 000 NTS map (Figure 1). For example, NTS map 11D/10 comprises Claim Reference maps 11D/10A, 11D/10B, 11D/10C and 11D/10D, these maps being lettered in a clockwise direction from the SE corner of NTS map 11D/10.

Within the assessment report number, the Claim Reference map indicates on what part of the Province the exploration activities described in the assessment report were conducted. Only one Claim Reference map can appear in an assessment report number. Assessment reports which fall entirely within the boundaries of one Claim Reference map have their titles listed under that one particular Claim Reference map in PART I, the Claim Reference Map Index (see below). Assessment reports which fall across the boundaries of two or more Claim Reference maps have their titles listed under each one of the affected

Claim Reference maps in PART I, the Claim Reference Map Index. For example, an exploration program conducted near Windsor (Figure 1) falls within the boundaries of Claim Reference maps 21A/16D, 21H/01A, 11E/04B and 11D/13C. In the Claim Reference Map Index (PART I), the title of that assessment report is listed under each one of these four Claim Reference maps. Thus, report titles are commonly listed under several different Claim Reference maps in PART I.

Work on mineral (not petroleum) exploration licenses is also conducted offshore from mainland Nova Scotia e.g. for placer gold in marine sediments. These reports are assigned regular assessment report numbers and are found listed within the normal Claim Reference map divisions. However, in order for all offshore work to be conveniently grouped together, these reports are designated an unofficial Claim Reference map "OFFSHORE" and they also appear listed under OFFSHORE at the end of the Claim Reference Map Index section.

Commodity

Commodity represents the primary element, mineral or rock that forms the target of the exploration activities described in the assessment report. Each commodity is assigned a numeric code which is identified in Table 1. Assigning one commodity to an assessment report is an arbitrary decision, especially when several commodities could form the exploration target e.g. tin, tungsten and molybdenum. In such cases, although the report is identified by only one commodity in the report number, the other relevant commodities are recorded as keywords in the GEOSCAN database, and the report is still identified under these additional commodities in the accompanying Keyword Index (see PART IV Keyword Index).

County

County represents one of the eighteen formal districts of Nova Scotia in which the exploration activities were conducted. Each county is assigned a letter code which is identified in Table 1. For convenience, unofficial "counties" such as Cape Breton Island, Offshore and Nova Scotia have also been added to this category. Again, only one county can appear in the assessment report number. If an assessment report crosses county borders, the report is still identified under the additional counties in the Keyword Index.

Location

Location represents a specific town, village, lake, stream, hill, swamp etc. that falls within the area of the exploration activities described in the assessment report. A list of these locations and their corresponding number codes is kept on file in the department.

Successive Report Number

The successive report number (01 and onwards) represents an individual, assessment report assigned to a particular assessment file. In general, reports are numbered from oldest to most recent. The number (00), when used, represents a miscellaneous information category in which is usually found old memos, letters, incomplete reports and individual maps that did not belong to individual assessment reports.

INDEX ORGANIZATION

Report 84-2 is in fact four separate indexes under one cover, namely: a Claim Reference map index to assessment reports (PART I); an alphabetic exploration company and exploration licensee index to assessment reports (PART II); an index to the different map types contained in the assessment reports (PART III); and a keyword (or subject term) index to the assessment reports (PART IV).

PART I Claim Reference Map Index

The Claim Reference Map Index is a hierarchical, geographic index to the assessment reports that is primarily organized on the basis of the Nova Scotia Department of Mines and Energy Claim Reference map system (as described previously). Within each Claim Reference map section, the assessment reports are further ordered on the basis of assessment report number with subordering by means of commodity, followed by county, followed by location, followed by successive report number. OFFSHORE reports are found after the last Claim Reference Map Section 21H/03A.

PART II Exploration Company and Exploration Licensee Index

This index is an aplhabetic listing of the exploration companies and exploration license holders who were responsible for submitting these

assessment reports to the Nova Scotia Department of Mines and Energy. Joint venture partners and option partners (when known) are also included in this alphabetic index.

PART III Map Type Index

Assessment reports contain maps, in the form of loose enclosures, fold-outs and bound pages. Report 84-2 contains an index to these maps, which allows the reader to determine what types of maps exist in what areas of Nova Scotia. The Map Type Index is organized on the basis of the Claim Reference map system (Map Sheet) and within each map division, the map types are subdivided on the basis of broader map types (General Map) and further subdivided into narrower map types (Specific Map). For each Specific Map type, the corresponding scale, year of publication and reference (source) are given. Within Specific Map type, the individual maps are arranged in order of scale when more than one example of the same Specific Map type occurs e.g. Location 1:1 000 before Location 1:50 000 before Location 1:1 000 000.

PART IV Keyword Index

The microfiche Keyword Index (inside, back cover) is an alphabetic listing of all the keywords (or subject terms) used to describe the relevant contents of all the assessment reports contained in Report 84-2. In the Keyword Index, listed below each keyword are the titles of all the assessment reports in Report 84-2 that contain that particular term or concept. Thus, the Keyword Index allows all the assessment reports in this index to be searched on any one particular keyword or subject term. For example, all assessment reports in Report 84-2 concerned with exploration for gold, can be found listed as a series of titles under the keyword "GOLD" in the alphabetic listing of keywords.

GEOSCAN

Report 84-2 was prepared from magnetic tapes generated from GEOSCAN, the national bibliographic database for geological information. GEOSCAN is operated by the National GEOSCAN Centre (NGC), Geological Survey of Canada, in conjunction with participating federal and provincial geoscience agencies. The Nova Scotia Department of Mines and Energy is an active participant in GEOSCAN, and specific search enquiries and custom indexes can be generated upon request from GEOSCAN, using on-line terminal connections in the Halifax office, or through the NGC in Ottawa.

ACKNOWLEDGEMENTS

We thank David S. Reade, Head, and Tony Kopf-Johnson, Database Manager, National GEOSCAN Centre, Ottawa, for their advice and cooperation, and help in generating the magnetic tapes from which this index was prepared. We also thank Dr. Jack Garnett, Assistant Deputy Minister and Dan Murray, Director of Mineral Development, for their continued support and encouragement of our GEOSCAN activities, and Lois Miller for her text editing skills, all of the Nova Scotia Department of Mines and Energy.
